

### ***I suspect that I, or my son or daughter, may have autism: What should I do now?***

- Explore the benefits and drawbacks of having an assessment and getting an Autism Spectrum Disorder (ASD) diagnosis. This is especially true for adults who suspect they have ASD.
- Benefits of a diagnosis: promotes an understanding of the individual's strengths and challenges; facilitates education and advocacy; gains access to ASD support groups, programs, services, and resources; and it may qualify you for funding and educational / workplace support and accommodations.
- Drawbacks of a diagnosis: having the individual receive a "label"; and others may have false beliefs/ideas about ASD.
- If you have concerns that you have, or your child has, symptoms of autism, speak to your family physician about your concerns. He/she can refer you to a developmental paediatrician, the Autism Spectrum Disorder Diagnostic Clinic at the Child Development Centre (Alberta Children's Hospital), or a physician or psychologist who specializes in ASD.
- In many instances, you will require a clinical report to confirm whether or not you, or your child, has autism in order to access programs or services.

## RESOURCES

The Resource Centre (a Sinneave Family Foundation initiative) does not endorse or guarantee the exhaustive, complete, accurate or up-to-date nature of information provided and does not assume any risk for the outcome of information or referrals provided.

### **Affinity Psychology Group**

A family psychology group that offers psychological services across the lifespan including ASD Diagnosis, Assessment and Counselling. Costs associated.

**Phone:** 403.244.9616 ext. 100  
**Address:** 2804 - 16 Street SW, Calgary, AB T2T 4G4  
**Email:** [info@AffinityCalgary.ca](mailto:info@AffinityCalgary.ca)  
**Website:** [affinitycalgary.ca](http://affinitycalgary.ca)

### **Autism Spectrum Disorder Diagnostic Clinic (Alberta Health Services)**

Provides diagnostic assessment and/or consultation services for pediatric patients 0 - 18 years of age with a question of ASD.

A referral form must be completed by a physician or an allied healthcare professional and the parent must be aware of and willing to participate in the process. A family physician must be supportive of the referral. It is the responsibility of the parent and referral source to provide all relevant assessments and documentation. Parents must attend pre and post information sessions.

No costs associated. There are three different processes according to the child's age:

1. Children aged 12 to 39 months are seen for a 1-hour play based appointment with a speech and language pathologist (SLP) or an occupational therapist (OT) for a screening assessment (not a diagnosis). Parents are given questionnaires to complete.
2. Children aged 40 months to 6 years are seen by an SLP or OT for a 90 minute session. Parents are given questionnaires to complete and the child is observed interacting with his or her peers (e.g. in a preschool or daycare). A referral to a psychologist is done, as needed.
3. If school-aged children are determined to fit the diagnostic criteria, they are seen by a pediatrician and a psychologist. If not, they are given referrals for appropriate services.

**Phone:** 403.955.5999  
**Fax:** 403.955.5990
